

ABSTRACT OF THE DISCLOSURE

In accordance with the invention, a method and system is provided by which door panels are installed on the cabinet. A bottom support and a top support are installed to corner posts in the cabinet. A bottom door jamb is installed on the bottom support. Pivot pins are provided at a top and bottom of each of the right and left door panels. With the door panels upright, the respective bottom pivot pins are inserted in respective apertures of the bottom door jamb. An upper door jamb is positioned such that apertures of the upper door jamb are received over the respective top pivot pins of the right and left door panels. The upper door jamb is then attached to the top support.
